

### REMARKS

A Sequence Listing is submitted herewith. In order to comply with sequence listing requirements following changes were made to the specification. The specification has been amended to insert Sequence Identifiers as appropriate. In paragraph [0016], which describes Figure 1A, SEQ ID NOS 21 -24, 129 and 130 were assigned to the sequences represented in the Figure. In paragraph [0017], which describes Figures 2A and 2B, SEQ ID NOS 109, 110, 107, 108, 131 and 132 were assigned to the sequences represented in these Figures. In paragraph [0018], which describes Figures 3A and 3B, SEQ ID NOS 92, 93, 135, 136, 133 and 134 were assigned to the sequences represented in these Figures. In paragraph [0019], which describes Figures 4A - C, SEQ ID NOS 94, 95, and 77 - 80 were assigned to the sequences represented in these Figures. In paragraph [0020], which describes Figures 5A - D, SEQ ID NOS 96, 97, 71, 98, 72, 69, 99, 70, 73, 100, 74, 75, 101 and 76 were assigned to the sequences represented in these Figures. In paragraph [0023], which describes Figures 8A and 8B, SEQ ID NOS 104, 85, 86, 87, 88, 89 and 90 were assigned to the sequences represented in these Figures. In the paragraph [0024] of the present application, which describes Figures 9A and B, SEQ ID NO:120 was assigned to the nucleotide sequences of human HIN-1 represented in Figure 9A. In paragraph [0025] of the present application, which describes Figures 10A and 10B, SEQ ID NOS 121 - 124, 126, 127 and 128 were assigned to the sequences represented in these Figures.

Furthermore, the Applicants respectfully request entry of amendments that were made to the specification in Table 4, which reflect following changes. On page 75 originally filed SEQ ID NOS 135 and 136 were submitted in error and have been replaced by the sequences contained in Figure 3B. SEQ ID NO:107 cited on page 76 of the specification has been amended to correct a typographical error. The amended sequence is supported by the application and represented in Figure 2C. The amended sequences are supported by the originally filed specification, therefore do not add new matter. On page 76 SEQ ID NOS 133 and 134 have been changed to SEQ ID NOS 131 and 132 since SEQ ID NOS 133 and 134 were used to identify different sequences on page 75, Table 4 of the present application. The Sequence Listing shows sequences that were present in the subject application as filed and, therefore, does not add new matter.

**EXHIBIT A**

**MARKED VERSION SHOWING THE AMENDMENTS**

The specification has been amended as follows:

[0016] **Figure 1A** shows the nucleotide sequence of the cyclin D2 promoter (SEQ ID NO:105). Regions highlighted indicate primer sequences. CG nucleotide pairs are shown capitalized and bolded. A highlighted box shows the location of an atg codon. **Figure 1B** shows nucleotide sequences for forward (F) and reverse (R) primer external and internal pairs (SEQ ID NOS 21 - 24, 129 and 130) used to detect methylated (M) and unmethylated (U) nucleic acids. The base pair (BP) length of the primer pair product is also indicated.

[0017] **Figures 2A and 2B** show the nucleotide sequence of the TWIST promoter (SEQ ID NO:106). Regions highlighted indicate primer sequences. CG nucleotide pairs are shown capitalized and bolded. A highlighted box shows the location of an atg codon. **Figure 2C** shows nucleotide sequences for forward (F) and reverse (R) external and internal primer pairs (SEQ ID NOS 109, 110, 107, 108, 131 and 132) used to detect methylated (M) and unmethylated (U) nucleic acids. The base pair (BP) length of the primer pair product is also indicated.

[0018] **Figure 3A** shows the nucleotide sequence of the Retinoic Acid Receptor Beta (RAR $\beta$ ) promoter (SEQ ID NO:91). Regions highlighted indicate primer sequences. CG nucleotide pairs are shown capitalized and bolded. A highlighted box shows the location of an atg codon. **Figure 3B** shows nucleotide sequences for forward (F) and reverse (R) external and internal primer pairs (SEQ ID NOS 92, 93, 135, 136, 133 and 134) used to detect methylated (M) and unmethylated (U) nucleic acids. The base pair (BP) length of the primer pair product is also indicated.

[0019] **Figure 4A** shows the nucleotide sequence of *Homo sapiens* serine protease-like protease (NES-1) mRNA (SEQ ID NO:94). **Figure 4B** shows the nucleotide sequence of the NES-1 region (exon 3) analyzed (SEQ ID NO:95). Regions highlighted indicate primer sequences. CG nucleotide pairs are shown capitalized and bolded. **Figure 4C** shows nucleotide

sequences for forward (F) and reverse (R) primer pairs (SEQ ID NOS 77 – 80) used to detect methylated (M) and unmethylated (U) nucleic acids. The base pair (BP) length of the primer pair product is also indicated.

[0020] **Figure 5A** shows the nucleotide sequence of HOXA5 promoter [(3' to 5')] (SEQ ID NO:96). CG nucleotide pairs are shown capitalized and bolded. A highlighted box shows the location of a cat codon. **Figure 5B** shows the nucleotide sequence of the complementary region (5' to 3'') analyzed (nucleotides -97 to -303) (SEQ ID NO:97). Regions highlighted indicate primer sequences. CG nucleotide pairs are shown capitalized and bolded. Highlighted box shows an atg codon. **Figure 5C** shows nucleotide sequences for forward (F) and reverse (R) primer pairs (SEQ ID NOS 71, 98, 72, 69, 99 and 70) used to detect methylated (M) and unmethylated (U) nucleic acids. The base pair (BP) length of the primer pair product is also indicated. **Figure 5D** shows forward and reverse (sense and antisense) primers (SEQ ID NOS 73, 100, 74, 75, 101, 76) used for sequencing and expression of HOXA5.

[0023] **Figure 8A and 8B** show the nucleotide sequence of *Homo. sapiens* (SEQ ID NO:104) estrogen receptor beta gene, promoter region and partial cds. CG nucleotide pairs are shown capitalized and bolded. **Figure 8C** shows nucleotide sequences of forward (F) and reverse (R) primer (SEQ ID NOS 85, 86, 87, 88, 89 and 90) pairs used to detect methylated (M) and unmethylated (UM) nucleic acids. The base pair (BP) length of the primer pair product is also indicated.

[0024] **Figure 9A** shows the nucleotide sequence of human HIN-1 (SEQ ID NO:120) cDNA. Regions highlighted indicate primer sequences. **Figure 9B** shows nucleotide sequences of forward and reverse external and internal primer pairs used to detect methylated and unmethylated nucleic acids. The base pair (bp) length of the primer pair product is also indicated.

[0025] **Figure 10A** shows the nucleotide sequence of the RASSF1A promoter (SEQ ID NO:121). CG nucleotide pairs are shown capitalized and bolded. Regions highlighted indicate

primer sequences. **Figure 10B** shows nucleotide sequences of forward (F) and reverse (R) external and internal primer pairs (SEQ ID NOS 122, 123, 124, 126, 127 and 128) used to detect methylated (M) and unmethylated (UM) nucleic acids. The base pair (BP) length of the primer pair product is also indicated.
